

KST-N

KS COOLING TOWER

**COUNTERFLOW, BOTTLE TYPE
F.R.P. STRUCTURE**

MEMBER OF THE CTI

KING SUN INDUSTRY CO., LTD.

THE FEATURES OF KST-N

VACUUM FORMED FILL

KST-N series cooling towers use vacuum formed film type cellular fill. The heat exchange performance of it is about 20% higher than the hot press winded fill of ordinary round type cooling tower.

The fashion of the vacuum formed fill will always keep constant without changing after being glued. However, the ordinary hot press winded fill always lose it's fashion in the process of winding, pressing and gluing. Because the fashion lose it's constancy, the air flow is obstructed and heat exchange efficiency is reduced. Thus, about 20% performance of the cooling tower is lost.

VACUUM FORMED FILL

CUT TO BE ROUND TYPE FOR KST-N

2" DIA DRAIN SOCKET

In the range KST-N-20 through 1000, the drain socket are 2". This is very much helpful for cooling tower maintenance because of time saving.

EXTRA DRAIN PLUG

In the range KST-N-3 through 80, in the lowest position of the basin, we install an extra drain plug. After the cleaning work of the basin, the contaminated water could be fully drained off from this drain plug. This is very much helpful for cooling tower maintenance work to get rid of the contaminated water which is lower than drain socket.

OPTIONAL DRIFT ELIMINATOR

In the range KST-N-25 and up, the drift eliminator could be installed as an optional parts. The drift loss after the installation of the drift eliminator would be less than 0.005%.

The design condition of KST-N cooling tower is based on 37°C Inlet Water, 32°C Outlet Water and 27°C Wet Bulb temperature. Under these assumptions, 13LPM Water Flow is regarded as one ton. If we divide the Water Flow figure in this page by 13, the figure we get is the actual tonnage of this model.

1500	8200	2534	4540	100	500	1000	300	580	M20	200	20

KST-N	A'	B'
600	250	72
700	250	72
800	240	72
1000	240	72
1250	275	95
1500	275	95

The design condition of KST-N cooling tower is based on 37°C Inlet Water, 32°C Outlet Water and 27°C Wet Bulb temperature. Under these assumptions, 13LPM Water Flow is regarded as one ton. If we divide the Water Flow figure in this page by 13, the figure we get is the actual tonnage of this model.

JOB REFERENCES ABROAD

● Commercial building, Chicago, USA

● Mitsui ship building plant, Japan

● Prime minister office, Cambodia

● Miami beach conversion center, USA

● GSI power plant, Japan

● Broward community college, USA

● Exhibition center, port of Singapore authority

● Jizza steel plant, Jordan

JOB REFERENCES IN TAIWAN

● KLN Low Noise Type Cooling Tower

● KSTH High Temperature Wood Fill Cooling Tower

● KHT Crossflow Industrial Cooling Tower

● KCW Counterflow Industrial Cooling Tower

● KH Crossflow Modular Type Cooling Tower

● KFT Counterflow Modular Type Cooling Tower

KING SUN INDUSTRY CO., LTD.
