Centrifugal Chiller

New **GXG-S, GSG-S Series** Debut

High-efficiency New series Centrifugal Chillers that use HFC134a are excellent products developed by Hitachi, fully utilizing its advanced technology and rich experience. They are active throughout the world due to their high reputation and excellent performance.

Advantages

■ Excellent Energy-Saving Effect

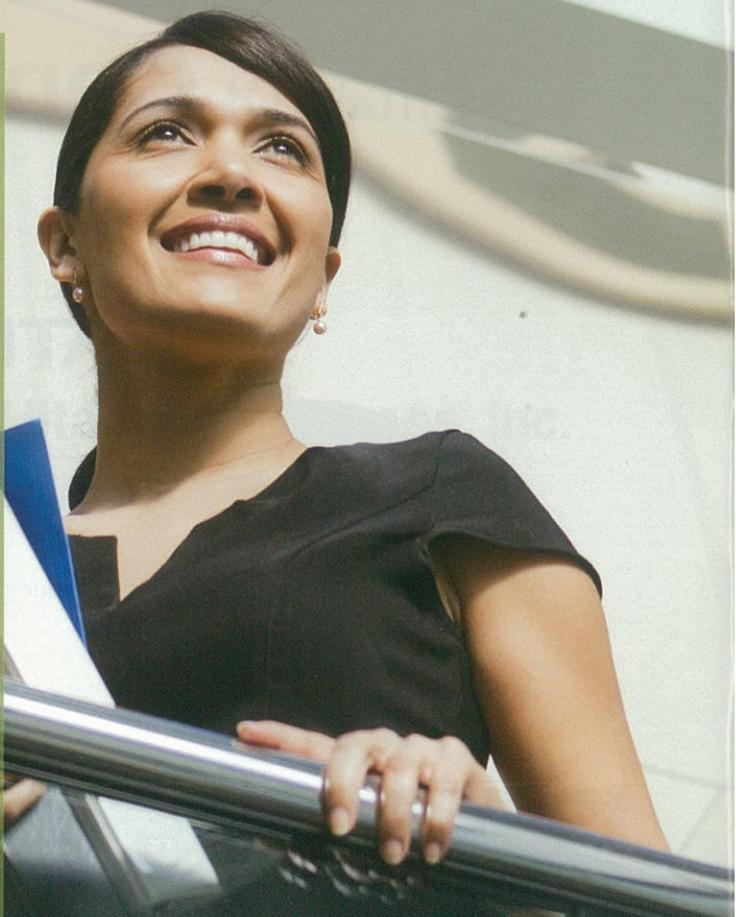

First class efficiency greatly contributes energy saving of users.

■ Compact Design

Significantly compact and light weight design enables space saving and easy replacement.

■ High Reliability

Hitachi's unique technologies enhance high reliability and long term stable operation.

Global Warming Prevention

Energy saving by high-efficiency centrifugal chillers

Global warming refers to the phenomenon of global rising in average atmospheric temperatures due to increased volume of CO₂ and methane as a result of burning fossil fuels such as petroleum and coal. The 1995 IPCC* Report predicted that if the emission of CO₂, etc. continued as it was, the atmospheric temperature would rise by as much as 2°C by the end of the 21st century and, as a result, the sea level would rise by approximately 50 cm from the present level. In such circumstances, it is even more important to save the energy consumed by air conditioners in order to cut CO₂ emission.

* IPCC: Intergovernmental Panel on Climate Change

Hitachi's Key Technologies Realizing High-Efficiency.

High-efficiency Refrigerant Cycle

Increased refrigerating cycle efficiency

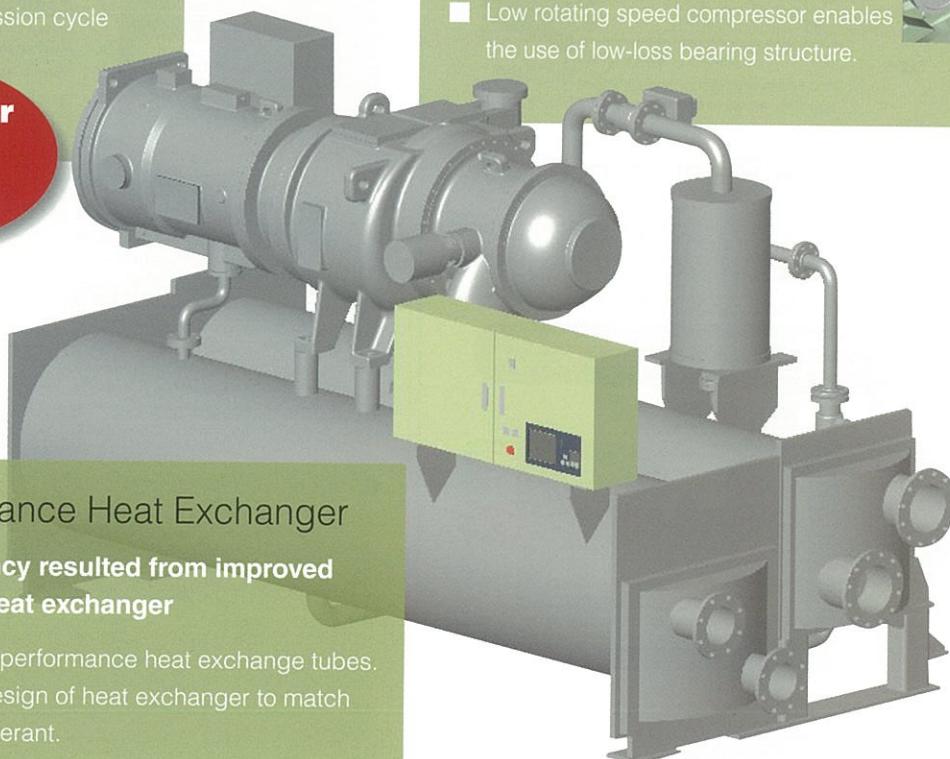

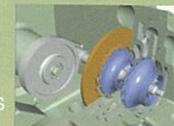

- 2 stages compression cycle

**COP over
6.5
Achieved**

High-efficiency Compressor

Increased compressor efficiency

- 3 dimensional blade impeller (2 stages)
- Vaned diffuser
- Low rotating speed compressor enables the use of low-loss bearing structure.

High-performance Heat Exchanger

Increased efficiency resulted from improved performance of heat exchanger

Employment of high-performance heat exchange tubes.
Optimal structural design of heat exchanger to match the behavior of refrigerant.

Hitachi's High Technology and Rich Experience Realized Compact, High-Efficiency and High-Reliability Chillers

Top-class Compact Design and Light Weight Design

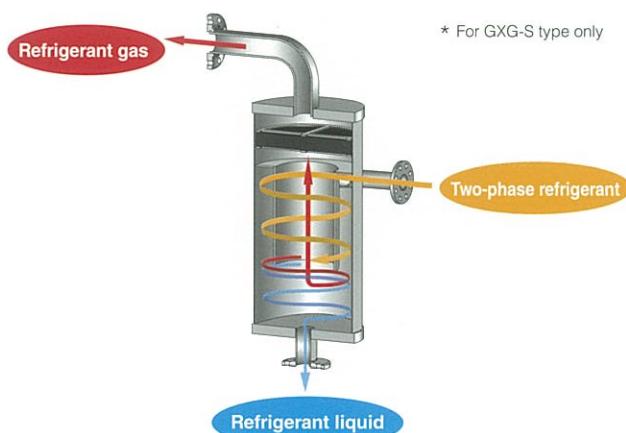

- The compact design greatly improves flexibility in installation.
- Realizing space saving of machine room.
- Easy carry-in to machine room.
- Suitable for replacement of long-operating chillers.
- Significant reduction of refrigerant volume.

**Comparison of Chiller Size
(Comparison of 1000RT models)**

New Type Economizer

Improvement of vapor-liquid separation performance and significant downsizing are realized by the use of Newly-developed economizer. (cyclonic system)

Easy Operation with Touch Panel Type Control Panel

- Monitor various operating data
- Indicate trend graph during operation
- Trend data for max. 40 hours. (Updated every 1 hour)
- Indicate and store Operation history for the past 12 hours (Updated every hour)
- Indicate and store Failure and Alarm history (latest 6 times each)
- Show Handling Guide in case of failure
- Automatic restart function after instantaneous power failure (Option)
- Multilingual Languages Indication (Japanese, English, Chinese [Simplified, Traditional], Portuguese)

Chiller Operating		15:41
Chilled W Outlet Temp.	7.2 °C	Main Motor Operating
Cooling W Inlet Temp.	30.8 °C	Oil Pump Operating
Oil Supply Temp.	41.5 °C	
Condenser Pressure	8.76 MPa	
Control Output	35.76	
Vane Position	35 %	
Main Motor Current	67.3 A 22.8 %	Initial Screen MENU

Operation screen

Failure Screen		Fail.Indic.	MENU
Main Motor Overloaded	Main Motor High Temp.	Condenser High Press.	Evaporator Low Press.
Chilled W Overcooled	Oil Supply Low Press.	Oil Supply High Temp.	Oil Tank Low Temp.
Oil Pump Overloaded	Start-up Time Out	Chilled W Suspended	Cooling W Suspended
Water Pump Interlock Abnormal	Ctrl. Sensor Abnormal	Start Panel Emergency Stop	

Failure screen

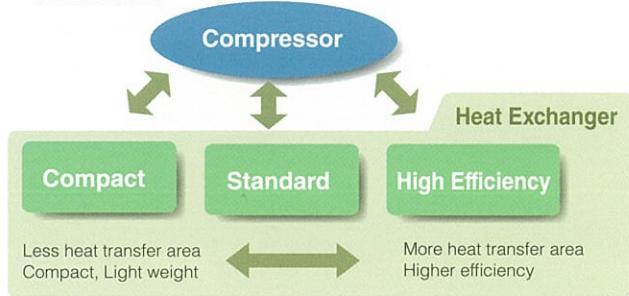

Main Motor Overloaded / High Temp.	
[Cause]	=> [Countermeasure]
Power voltage imbalance =>	Reduce fluctuation
Power open-phase	=> Check power cable connection
Large voltage drop =>	Check power supply system
Excessive low-head =>	Enlarge pressure difference between Condenser & Evapo
Ref. strainer clogging =>	=> Clean refrigerant strainer
Starter panel abnormal	=> Check starter panel
Main motor earth fault	=> Measure main motor insulation resistance

Handling guide screen

Flexible Combination of Compressor & Heat Exchangers

- Optimum model selection upon Customer's request for Efficiency, Pressure Drop, Initial Cost, Installation Space, etc.
- Higher COP level can be achieved depending on the combination.

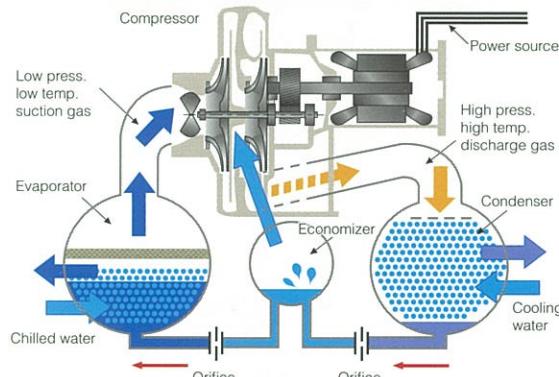

2-stage Compression Cycle

To improve compressor efficiency, refrigerant economizer is added with 2-stage compressor equipped with 2 impellers, as shown in the drawing below. In this case, the refrigerant goes through two expansion devices.

When the refrigerant goes through the first device, some of the refrigerant flashes, or become a gas.

The flashed refrigerant is introduced to the compressor between the two stages. In the one-stage compressor cycle without the economizer, all refrigerant flows in the cycle. Comparatively, in the 2-stage compressor cycle the part of the refrigerant is bypassed from the economizer to the 2-stage impeller.

2-stage Centrifugal Chiller Cycle

Compatible with BMS

Chiller control panel is equipped with RS485 communication port and compatible with Building Management System through MODBUS RTU protocol.

Communication Item

Operation Condition

- Date (Year/Month/Day)
- Time (Hour/Min. /Sec.)
- Chiller (operation/stop)
- Oil pump (operation/stop)
- Oil heater (operation/stop)
- Main motor (operation/stop)
- Low load stop (on/off)
- Restart restriction (on/off)
- Condenser pressure Limit (on/off)
- Failure (presence/absence)
- Chiller operation (remote /local)
- Chiller operating hours
- Main motor operating hours
- Oil pump operating hours
- Oil heater operating hours
- Chiller operation times
- Main motor operation times
- Failure times
- Failure information (*1)

(*1) Failure Information

- Main motor high temperature
- Main motor overloaded
- High condenser pressure
- Low evaporator pressure
- Chilled water overcooled
- Low oil supply pressure
- High oil supply temperature
- Low oil tank temperature

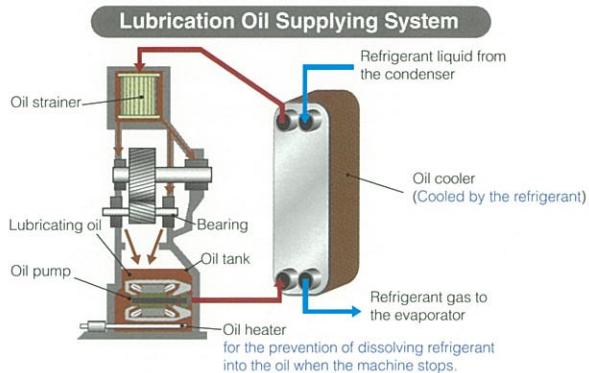

Operation Data

- Chilled water inlet temperature
- Chilled water outlet temperature
- Cooling water inlet temperature
- Cooling water outlet temperature
- Oil supply temperature
- Oil Tank temperature
- Main motor operating current (A)
- Main motor operating current (%)
- Vane position
- Control output for Vane position
- Condenser pressure
- Evaporator pressure
- Oil supply pressure

- Oil pump overloaded
- Start-up time out
- Starter panel abnormal
- Chilled water suspended
- Cooling water suspended
- Water pump interlock abnormal
- Control sensor abnormal
- Emergency stop

High Reliability Design

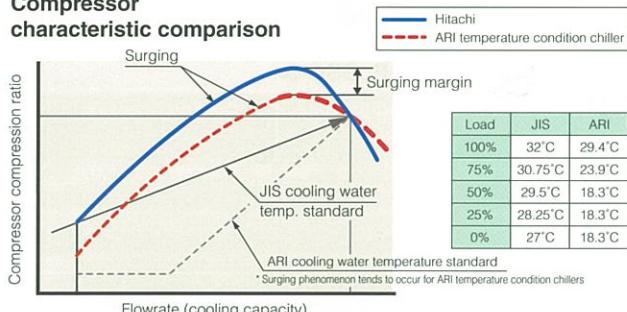

Direct refrigerant cooling of lubrication oil in oil cooler without cooling water piping increases reliability.

Surge Protection

Adopting strict criteria specified in JIS for stable operation under high cooling water temperature. 3D 2-stage impeller enables stable operation even at low cooling load or high cooling water inlet temp. which prevents occurrence of surge.

Compressor characteristic comparison

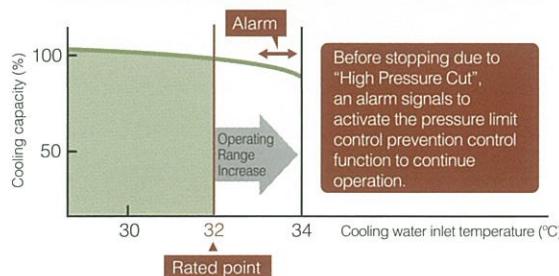

* This figure shows general characteristics and does not provide any guarantees as to the performance.

Wider Operating Range

Stable operation continues even when rise of condenser pressure due to cooling water temperature in hot summer and/or proceeding of tube fouling.

Example of rising cooling water temperature due to rising ambient temperature.

Soft starter is available (Optional)

Soft starter enables smooth start up of motor without large rush current.

General Data

Specifications

■ High Efficiency Type HC-F_GXG-S

REMARKS

- * Please consult with our sales staff or distributor for actual specifications for cooling capacity, expected kW input, and COP, depending on selected operating parameters.
- * The above Specifications are subject to change without notice for technical improvements.
- * This table is applicable to chillers to be manufactured for normal water.
- * Capacity control range is 100% to approx. 20%.
- * Fouling factor is assumed to be 0.018m²K/kW for chilled water and 0.044m²K/kW for cooling water.
- * Standard main power sources: 380V/400V/415V/440V/460V (up to F1250GSG-S & F1400GXG-S), 3000V/3300V/6000V/6600V (any capacity), 10000V/11000V (F800GSG-S & F900GXG-S and above) AC, 50Hz/60Hz, 3phase.
- * Maximum working pressure is 1.0MPa for both chilled water and cooling water. If higher maximum working pressure is required, please specify during inquiry. (Up to 2MPa is available.)
- * Up to 2000USRT model can be supplied, please consult with our sales staff or distributor.
- * The above tables show the specification of low voltage (380~460V) models. (*1 HC-F1300~2000GSG-S, HC-F1500~2000GXG-S: specification for high voltage models.)

Standard Scope of Supply

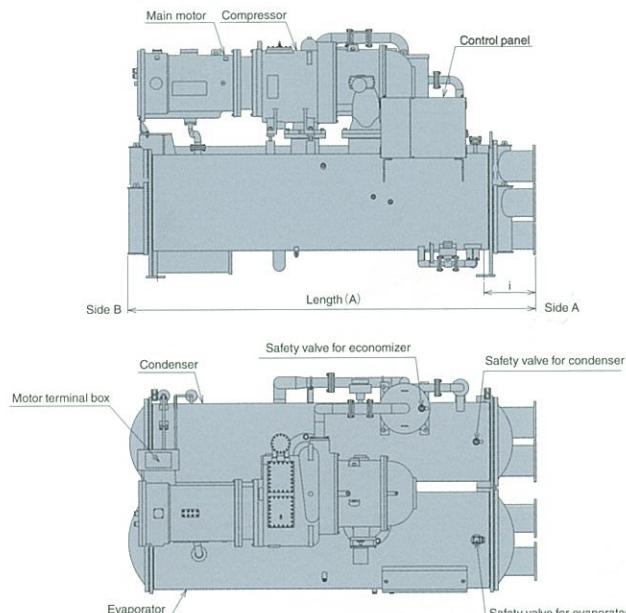

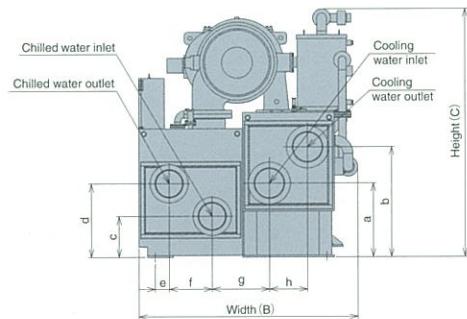

The following table shows the standard scope of supply, but the actual scope depends on the contract.
Please consult with our sales staff or distributor.

Item	Standard Scope
Main Equipment	Compressor, Main motor, Lubrication system, Heat exchanger
Auxiliary Equipment	Safety device, Control panel, Standard accessories (Corrugated rubber vibration insulator plates, Oil strainer elements, Gasket for oil strainer elements, Dryer), Starter (optional)
Coating	Chiller main unit: Anti-corrosive prime coating Control panel: Finish coat (color: Munsell 5Y8/1 gloss) Starter (optional): Finish coat (color: Munsell 5Y7/1 semigloss)
Out of Supply Scope	Foundation work, Carrying-in, Installation, Piping work, Cold insulation, Primary and secondary side electrical wiring, Commissioning for total system, Forced ventilation system, Outdoor discharge piping for safety valve, Counter flange, Bolt, Nut, Gasket, Foundation bolt, Refrigerant

Optional Items

- Min. cooling water inlet temperature 12°C (GXG-S), and 15°C (GSG-S)
- Variable chilled water flow rate (chilled water/cooling water)
- Max. working pressure up to 2.0MPa (evaporator/condenser)
- Min. cooling capacity 10%
- Marine type/hinged type water box (evaporator/condenser)
- Delivery in knockdown form (3 pieces – compressor, heat exchangers, control panel, 4 pieces)

Dimensional Outline Drawing

This dimensional outline drawing shows a standard nozzle location.
Please consult with our sales staff or distributor in case of a 3-pass or 4-pass system.

Positional Dimension of Water Piping
